

27-June-2022

“wstereo.pl” recommends our TWA-10B network player (06-2022).

**The playing spaciousness made the biggest impression on me. It was something! In this respect, TAGA Harmony is a competitor to devices that are several times more expensive.**

*TAGA Harmony has succeeded in this player, oh, they have done it! The company has created a miniature device that costs ridiculous money, can sound like a full-fledged component of an inexpensive but good audiophile system and it is really very functional. TAGA Harmony TWA-10B as a network player will meet the expectations of many amateurs of good sound, it can be used to build more than only an additional system for a bedroom or office. Wireless transmission, ease of use, compatibility with major streaming services and, above all, really good sound quality are the advantages of this player. **However, the really huge potential lies in this device used as a streamer. Connecting even an inexpensive but good DAC to it with a decent digital cable and adding a better power supply allows us to get a really high quality sound: very spacious and coherent, engaging and malleable, fast and dynamic. I think that not only streamers built on the basis of the popular Raspberry do not stand a chance with it, but also some designs that cost much more than the tiny TAGA Harmony. My recommendation.***
